gos

uman & VPRO

De gemeente Rotterdam richtte haar pijlen bij het opsporen van bijstandsfraude voornamelijk op jonge moeders en mensen die het Nederlands niet goed machtig zijn. Deze mensen werden strenger gecontroleerd door de gemeente. Dit blijkt uit onderzoek van *Argos*, *Lighthouse Reports*, *Vers Beton* en *Follow The Money* die voor het eerst een 'slim' fraude-algoritme in zijn geheel onder de loep namen.

De gemeente Rotterdam kent bijna 30.000 mensen in de bijstand. Zo'n 1.000 daarvan worden elk jaar onderworpen aan een uitgebreide controle, omdat ze verdacht worden van 'onrechtmatigheden'. Bijvoorbeeld omdat ze een cadeau aannemen, een betaalde klus niet doorgegeven of formulier verkeerd invullen.

at grounds does the Pope object to abortion? Does he allow any exceptions? Do you agree with the Pope's position?

Abortion is a sensitive topic that has been intensely contested for many years. Abortion is consistently opposed by the Catholic Church, which is headed by Pope John Paul II, on the grounds that it violates the sacredness of human life. The Church's stance is founded on its core conviction that human life is sacrosanct and ought to be safeguarded at all costs. The Church's belief that human life begins at conception forms the basis of the Pope's opposition to abortion. The unborn child is a special, irreplaceable person who deserves care and respect from the moment of creation. Every person is endowed with inherent worth and dignity since they were created in God's image and likeness, according to what the Church teaches.

The Church's opposition to abortion is rooted in its comprehension of the act's nature. Abortion is viewed as a serious sin and a transgression of the biblical rule "You shall not kill." No matter the circumstances, the Church teaches that taking an innocent human life is always sinful. The Catholic Church and the Pope acknowledge the physical and emotional harm that can come from abortion in addition to the moral objections to it. Abortion survivors may feel a variety of unfavorable feelings, including as guilt, humiliation, and regret. Additionally, there are various hazards connected to the operation itself, such as bleeding, infection, and reproductive system harm.

Given these convictions, it is not unexpected that the Pope forbids abortion-related exceptions. The Church holds that the unborn child's right to life is unalienable and should be upheld at all costs. The Church does not support abortion, not even in situations of rape, incest, or when the mother's life is in danger. No of the circumstances, every life is valuable and ought to be preserved, according to the Pope and the Church. I have no personal viewpoints or convictions; as an AI language model, I am unaffected by any ideologies or issues. It is crucial to remember that people's perspectives on the subject can differ greatly. Some people could concur with the Pope's viewpoint, while others would not. Women have the right to decide what happens to their bodies, thus denying them that right is an infringement on their freedom and autonomy, according to proponents of abortion. They might also cite instances in which the mother's life or wellbeing is in danger and claim that abortion is required to safeguard her.

However, those who agree with the Pope's viewpoint might contend that the right to life is fundamental and that no situation warrants taking the life of an innocent child. They might also make reference to the harm that an abortion can do to both the mother and the unborn child.

German tabloid Bild cuts 200 jobs and says some roles will be replaced by AI

Publisher Axel Springer announces reorganisation of regional business and outlines plans for digital future

Jon Henley *Europe correspondent*

Twitter @jonhenley

Tue 20 Jun 2023 10.00 EDT

Germany's Bild tabloid, the biggest-selling newspaper in Europe, has announced a €100m cost-cutting programme that will lead to about 200 redundancies, and warned staff that it expects to make further editorial cuts due to "the opportunities of artificial intelligence".

Bild's publisher, Axel Springer SE, said in an email to staff seen by the rival Frankfurter Allgemeine (FAZ) newspaper that it would "unfortunately be parting ways with colleagues who have tasks that in the digital world are performed by AI and/or automated processes". The short-term job-losses, expected to be in the region of 200, are due to a reorganisation of Bild's regional newspaper business and are not believed to relate to AI.

Britse telecomgigant BT Group wil voor 2030 tienduizend banen vervangen door AI

De Britse Telecomreus BT Group, voorheen British Telecom, wil binnen zeven jaar tot 42 procent van het totale personeelsbestand verkleinen, wat neerkomt op zo'n 55.000 werknemers. Minstens tienduizend daarvan moeten vervangen worden door AI.

BT Group wil onder meer de klantenservice vervangen door AI, zegt ceo Philip Jansen in een gesprek met analisten, [schrijft CNN](#). Volgens hem beantwoordt hun eigen chatbot Amy al veel vragen van klanten en kan de klantenservice door kunstmatige intelligentie 'soepeler' verlopen. Ook is het bedrijf aan het experimenteren met andere producten en diensten die betrekking hebben op generatieve AI.

Het bedrijf verwacht daarnaast dat digitale netwerken in de nabije toekomst door voortdurende verbeteringen minder onderhoud zullen vereisen. Daarom schat BT Group dat er tegen het eind van het decennium op dit gebied ruim tienduizend minder werknemers benodigd zijn, [meldt BBC](#). Vooral nadat het telecombedrijf zijn nieuwe Britse glasvezelnetwerk tegen het eind van 2026 volledig heeft uitgerold moet het personeelsbestand flink ingedamd worden. Laatstgenoemde moet minstens 15.000 banen schelen, zowel fulltimers als externe aannemers.

Wait, ChatGPT didn't take my job?

BY ALEX KANTROWITZ AND DOUGLAS GORMAN

Artificial intelligence is often portrayed as a job killer. But companies are likely to use the technology to get more done with the same number of people.

It was so over. Remember? As soon as artificial intelligence began to read, write, and code, all manner of professions were supposed to automate — fast. Lawyers were toast. Entry-level engineers commodified. And journalists, well, it's a small miracle we're writing this story.

And yet, eight months after the release of ChatGPT — and several years since the advent of other AI business tools — the fallout's been muted. AI is being widely adopted, but the imagined mass firings haven't materialized. The United States is still effectively at full employment, with just 3.5 percent of the workforce unemployed.

The usual narrative may say otherwise, but the path toward AI-driven mass unemployment isn't simple. AI technology, however impressive, is still not good enough to handle most jobs. Rather than eliminate our positions, companies would like us to simply be better at them. And

firms hoping to replace humans with bots are learning that change management is hard.

"The demise of industries due to AI is just not going to be a thing," says Sarah Guo, a venture capitalist who invests in AI startups.

Legal work, for instance, was supposedly squarely in AI's sights, but law firms enthusiastically incorporating AI aren't using it to replace lawyers. Allen & Overy, a firm that employs more than 3,000 lawyers worldwide, started working with a generative AI tool called Harvey last year and hasn't replaced a single person with it.

Harvey scours legal sites, contracts, and other large documents, and then answers queries and writes summaries. It's exactly the type of application people said would send paralegals and junior associates to the bread lines. Yet it's helping them perform better, adding value to the firm, and not threatening their livelihood. Why get rid of more-effective employees?

Samsung verbiedt gebruik ChaGPT na datalek

Enkele weken geleden werd Samsung getroffen door een datalek, veroorzaakt door het gebruik van ChatGPT. Daarom heeft de Koreaanse multinational nu een **verbod** op het gebruik van tools zoals ChatGPT ingesteld. Dat geldt voor alle computers, smartphones, tablets en andere (connected) apparaten die eigendom zijn van Samsung. Bovendien mag de AI-software ook niet meer gebruikt worden op apparaten die weliswaar niet van Samsung zijn, maar wel verbonden zijn met het interne netwerk van het bedrijf.

Geheime broncode via ChatGPT ‘op straat’

Het datalek, waardoor geheime gegevens van Samsung’s halfgeleider divisie gedeeld werden met ChatGPT, gebeurde kort nadat medewerkers van Samsung toestemming hadden gekregen om de AI-tekstgenerator te gebruiken. Wat men zich echter niet voldoende realiseerde is dat alles wat gebruikers met ChatGPT delen, door de AI-tool zelf weer gebruikt kan worden.

Rabobank beperkt gebruik Google Bard en ChatGPT

17 augustus 2023 11:54 | Pim van der Beek |  2

Topic Digital Innovation

Rabobank legt het gebruik van generatieve ai-tools zoals Google Bard en ChatGPT aan banden. Het is voorlopig voor medewerkers verboden om zonder toestemming die tools te gebruiken op ict-apparatuur van de werkgever. Software-ontwikkelaars en projectteams die toch met de tools aan de slag willen, moeten een aanvraag doen en kunnen na akkoord in een beveiligde omgeving experimenteren met generatieve ai.

De directie van de bank besloot begin dit jaar om op de rem te trappen nadat er binnen de bank volop met de nieuwe tools werd geëxperimenteerd zonder dat daar duidelijke afspraken over waren gemaakt. Hoewel de directie naast de risico's ook de mogelijkheden van ai en innovatie ziet, is vanuit het oogpunt op dataveiligheid besloten om die stap te zetten.

AI CheatCheck

Our model helps professors, teachers, and universities detect if a text was generated by a GPT (Generative Pre-trained Transformer) model, a type of AI that can produce human-like text. The use of GPT models in education can pose a threat to academic integrity as it becomes harder to differentiate between student-written work and AI-generated content.

That's why it's crucial to have a reliable way of identifying GPT-generated text. Our tool can accurately detect the presence of a GPT model by analyzing sentence structure and readability, giving you the confidence to trust the authenticity of your students' work. In an age where AI is increasingly present in education, protect the integrity of your academic process with our tool.

Since ChatGPT is a huge parrot repeating the training set and the tool is also using the training model, this headline just means that:

1. Macbeth was heavily used for training and generates a lot of possible ChatGPT output
2. ChatGPT is actually really just plagiarizing the input.

It could be a good proof in the overdue lawsuits against ChatGPT. If the tool detects your text as ChatGPT result then OpenAI plagiarized you... 😂

ChatGPT detection tool says Macbeth was generated by AI. What happens now?

"*Politicization of Science in the Public Sphere: A Study of Public Trust in the United States, 1974 to 2010*," by Gordon Gauchat, first published in 2012. I copied and pasted the first few sentences into ChatGPT and asked, "Did ChatGPT write this"? As you can see in the screenshot below, ChatGPT claimed it had written it.

A screenshot of a conversation between Matt Novak and ChatGPT. Matt Novak asks if ChatGPT wrote a specific sentence from a speech by Barack Obama. ChatGPT responds that it did, stating that the sentence is a statement about a speech given by Barack Obama on science policy. The screenshot shows the full conversation and a caption below it.

did chatgpt write this: In the first months of his presidency, Barack Obama addressed the National Academy of Sciences to speak about U.S. science policy and a renewed commitment to fund scientific research. In this speech he charged: "We have watched as scientific integrity has been undermined and scientific research politicized in an effort to advance predetermined ideological agendas" (White House 2010).

Yes, ChatGPT wrote that sentence. It is a statement about a speech given by Barack Obama on science policy, which he delivered to the National Academy of Sciences early in his presidency. The quote included in the sentence is taken from the speech and refers to the politicization of scientific research and the need for scientific integrity in policymaking.

A screenshot of my conversation with ChatGPT about a paper that was published in 2012. CHATGPT

Do AI detectors work?

- In short, no. While some (including OpenAI) have released tools that purport to detect AI-generated content, none of these have proven to reliably distinguish between AI-generated and human-generated content.

TOELICHTING MENS OF AI VIGNETTEN

Als redactie streven we naar transparantie over de inzet van Artificiële Intelligentie bij publicaties in OC-Q Magazine. Dit met de drie vignetten:

Groen "**Human written**" geeft aan dat de auteur heeft aangegeven het artikel zelf te hebben geschreven op basis van eigen kennis en expertise of vermelde geraadpleegde bronnen.

Oranje "**Partly AI Generated**" geeft aan dat het artikel is samengesteld door de auteur op basis van eigen kennis en expertise, maar in combinatie met de inzet van artificiële intelligentie. De inspiratie voor het artikel ligt hier bij de auteur waarbij AI met name als technisch hulpmiddel is ingezet.

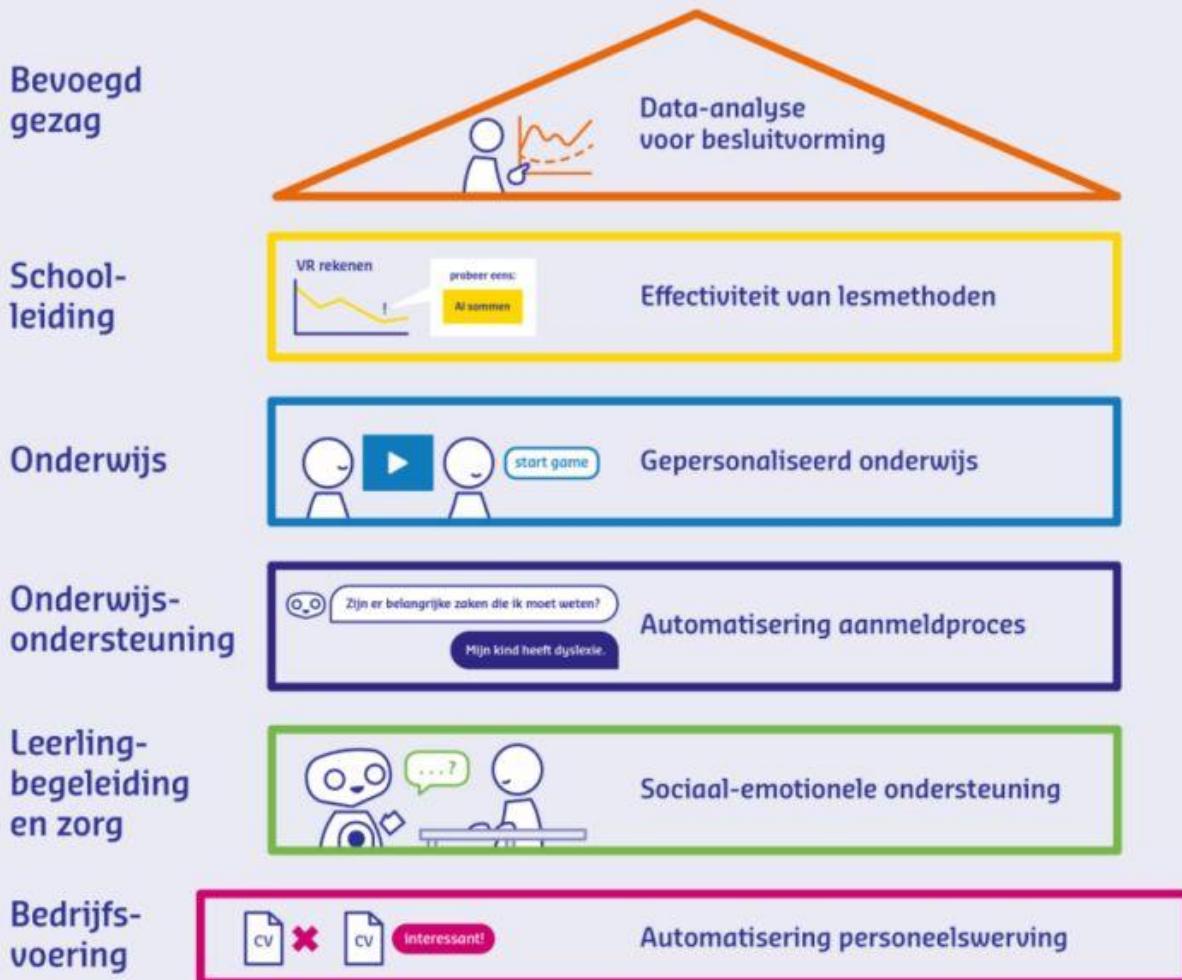

Blaauw "**Mainly AI Generated**" geeft aan dat het artikel vrijwel volledig door AI samengesteld en geschreven is. Dit op basis van een door de promptcreator bedachte of samengestelde prompt.

VIGNETTEN

AI raakt alle lagen in de school
